

forking

- A **fork** generally refers to creating a copy of a repository.
- This copy allows you to make changes independently from the original repository.
- On GitHub, when you fork a repository, it creates a personal copy of the repository under your own account.

2. Click “Fork” button

Git Workshop

This repository is for the participants of the Git workshop to fork, clone and make a pull request.

Future Plan

We plan to make a website consolidating all the attendees of the workshop in an automated way using some static site generator. If any one has some free time, feel free to help us out!
