

git add

<https://git-scm.com/docs/git-add>

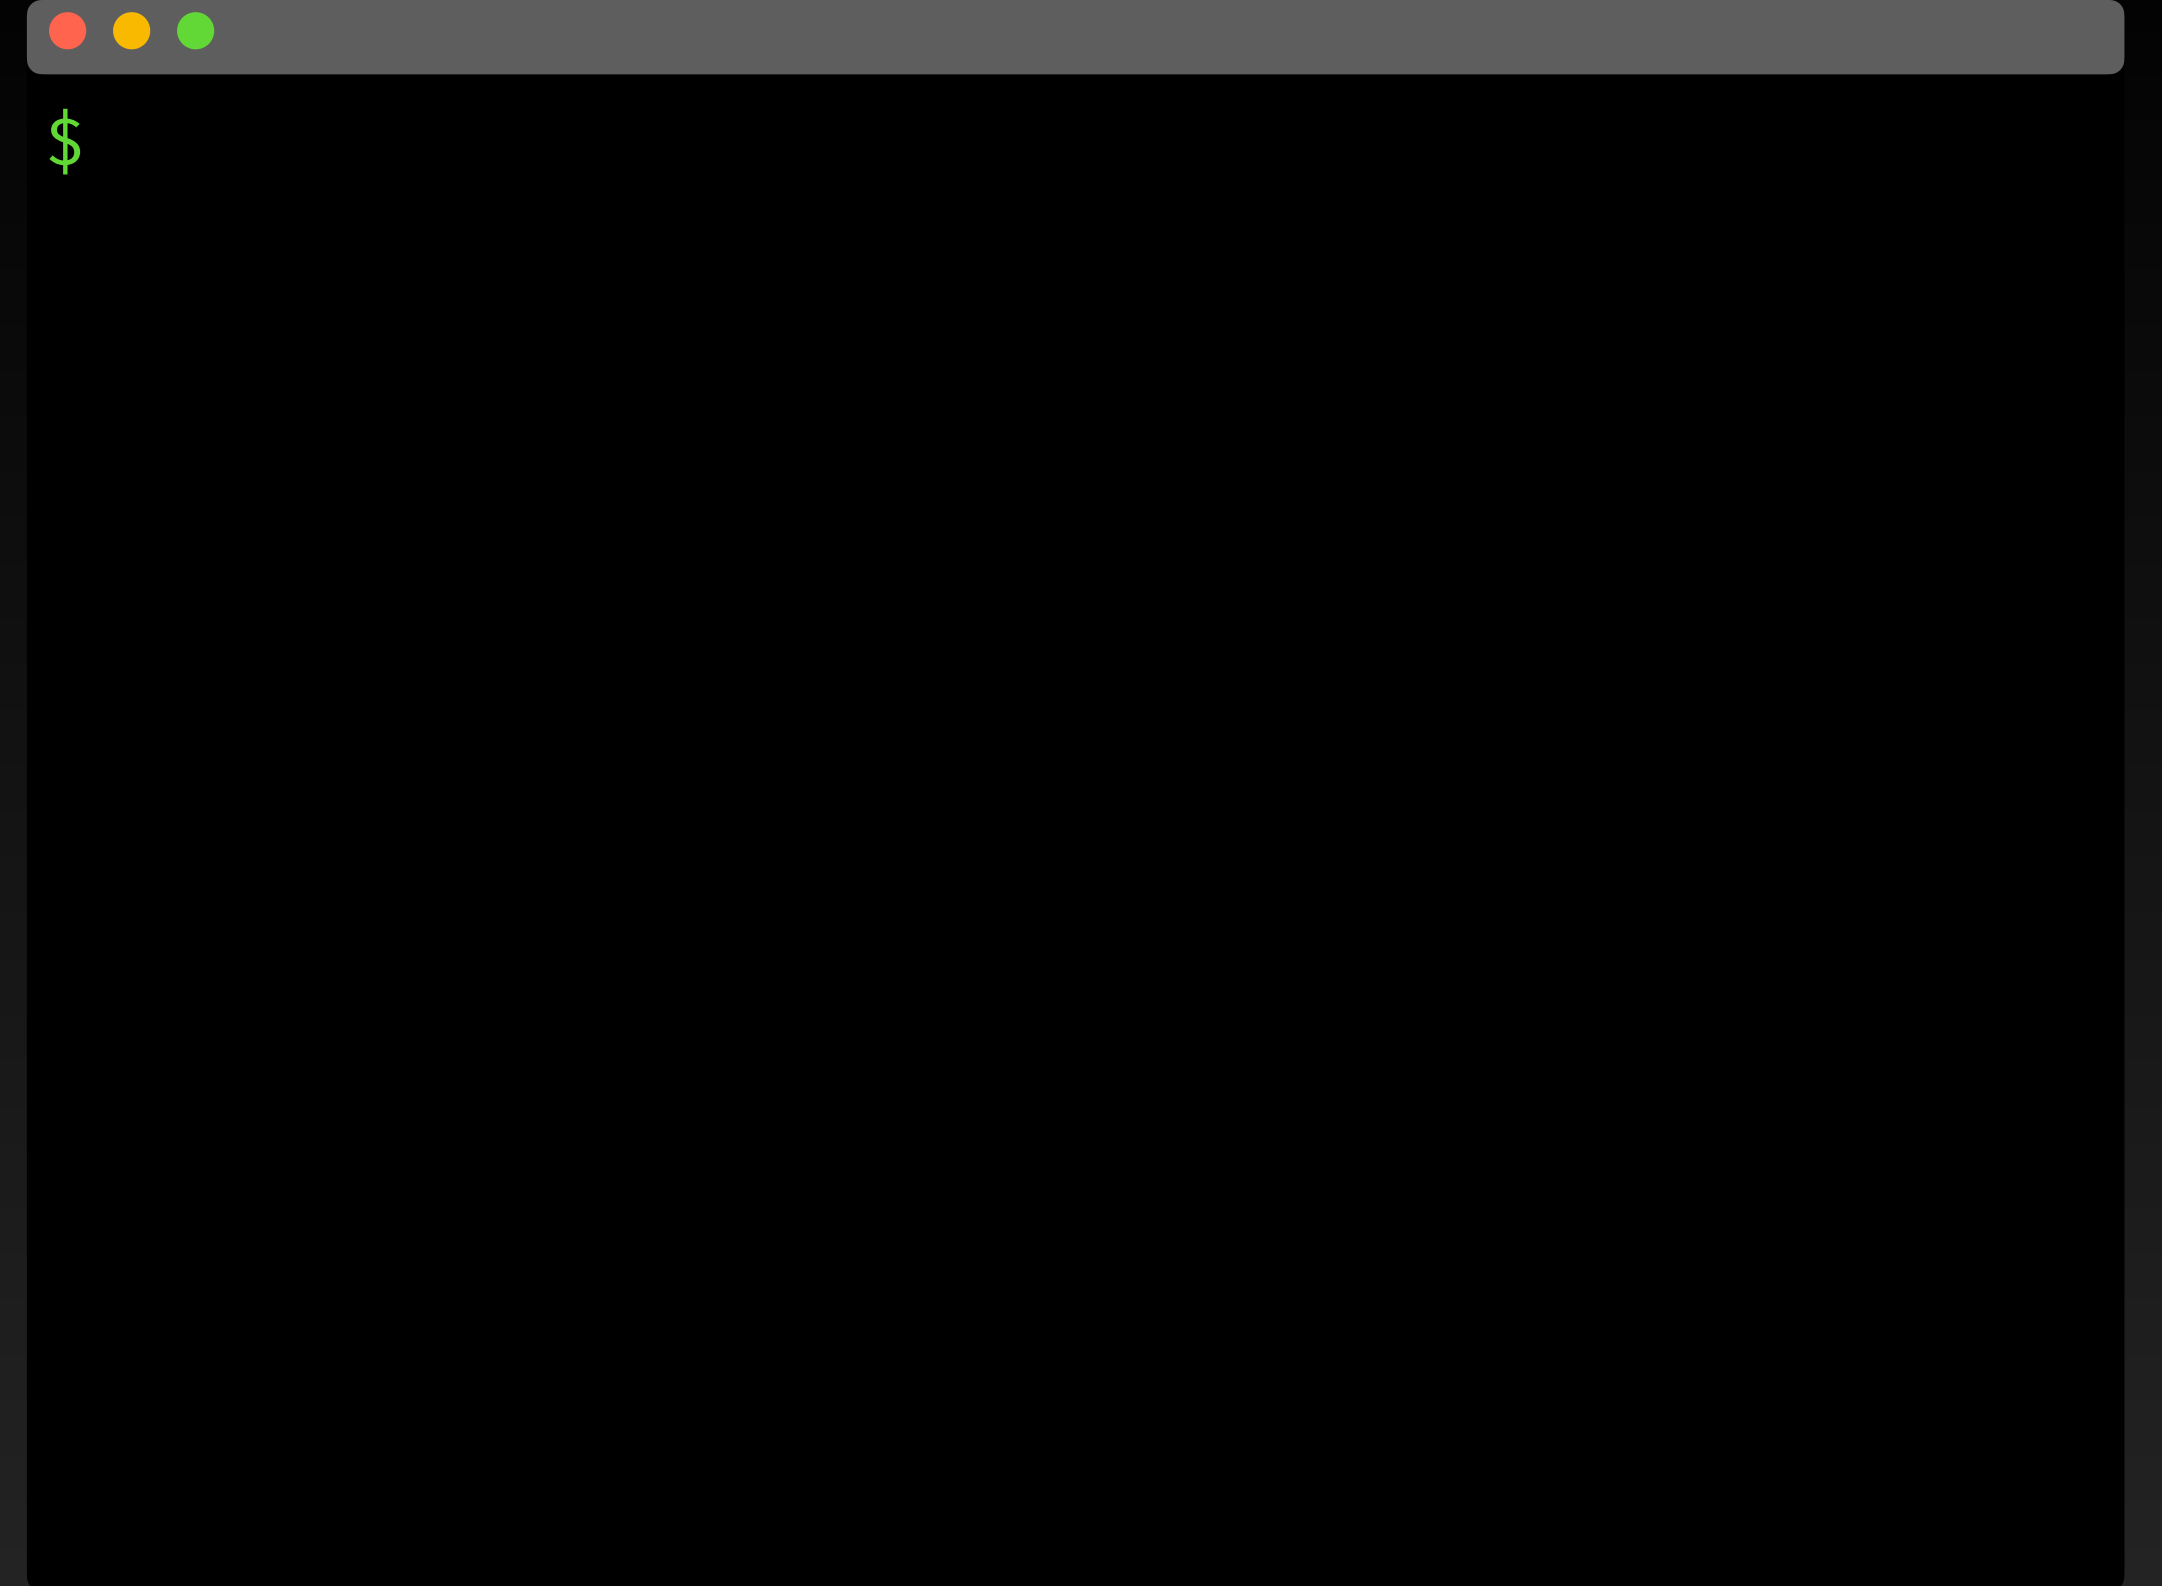

- This command updates the index using the current content found in the working tree, to prepare the content staged for the next commit.
- `git add .` – add all untracked changes to stage
- `git add <path>` – add all files in given path to stage

A code editor window with a dark gray sidebar on the left and a white main text area. The sidebar contains the text ".git/" and "Main.java". The main text area contains the following Java code:

```
package com.artusacademy

public class Main {
    public static void main(String[] args) {
        System.out.println("Hello World");
    }
}
```

A terminal window with a dark gray title bar and a black main area. A green prompt character "\$" is visible at the top left of the main area.
