

```
$ git init
Initialized empty Git repository in /app/.git/

$
```

A terminal window with a dark background and a light gray title bar. The title bar contains three colored window control buttons (red, yellow, green) on the left. The terminal displays the command `$ git init` in green text, followed by the output `Initialized empty Git repository in /app/.git/` in white text. A new green prompt `$` is shown on the next line.

created a .git folder

- This is the "thing" which makes your project a Git repository
- **.git** contains all information required for version control.
- If you want to clone your repository, copying **.git** is enough.
